

# **Specification**

A) **Title:** "Cheque Please Wait or Service Person Summoning Device."

B) Cross reference to related applications: none.

C) Reference to microfiche appendix: none.

Total number of microfiche: zero. Total number of frames: zero.

## **D) Background of the invention**

1. Field of the invention: The technical field of this invention is: The field of endeavor to which this invention pertains is: signaling to service people - the signaling to service persons that their presence is needed and/or that a check for goods and services provided by the establishment is wanted by the individual(s) who have in their possession the "Check Please Wait or Service Person Summoning Device."

This invention solves problems and has advantages from two points of view, the point of view of the person who displays or uses the invention, the operator who would usually be the customer, too, and the point of view of the wait or service person(s).

This invention solves these previously existing problems:

From the point of view of the user of the invention, the invention solves the following problems: the problem of wasting one's time and emotional resources futilely trying to gain the attention of the wait person by visually tracking their movements(s) and waving one's hand(s) in the air; the problem of loss of focus and concentration required in face to face conversation with business associates, family members or dates (courting) while futilely trying to gain the attention of the wait person by visually tracking their movements(s) and waving one's hand(s) in the air. It is also useful when one is alone and doesn't want to be aggravated by the neck turning and hand waving necessary to gain the attention of the wait person. The problem of abrupt expletives or other aural pollution being spewed into the environment by an aggravated customer is also addressed by the use of this device as the (use of the device) eliminates the customer's frustration when he or she is trying to gain the attention of the wait person by engaging in the above

behaviors.

From the point of view of wait or service person(s), the invention solves the following problems: the problem of being unaware that customer(s) at any given table or counter are in need of service. If the "Cheque Please Wait or Service Person Summoning Device" is being used, a wait or service person needs only to scan the room visually to notice a glowing LED lighted at a table and then go to the source of the signal. Also, there are no misinterpretations of customers' signals when they are using the device as there might be if a customer is waving their hand or moving their eyes about. From the wait person's point of view, are these gestures signals for the wait person's attention or are they conversational gestures or are they just mannerisms? The use of the device eliminates the problem of interpretation and enables exact and correct signals between customers and wait persons.

This invention has the following advantages:

From the point of view of the user of the invention, the invention has the following advantages: the use of this invention allows the owner of the device and his/her guest(s) to continue their conversations(s) without the aggravating interruptions required to gain the attention of the wait person. The use of this device allows more freedom from interruption of attention given to one's companion(s) at the location where the device is being used. The device's glowing LEDs (light-emitting diodes - lights on the device) are easily visible across a room and come to the attention of service or wait persons sooner or later with little effort on the part of the owner. The LEDs are of low intensity and the device does not visually annoy nearby patrons. The use of the device also eliminates aural pollution (shouting for the wait person). It is very civilized.

From the point of view of wait or service person(s), the invention has the following advantages: the use of this device enables the wait or service person(s) to give better service, more timely and faster service, to customer(s) who use the device. The use of the device enables the wait or service person(s) to become aware more quickly that they are needed at any table where the device is in use. It enables wait or service person(s) to give their attention more efficiently where it is needed. It enables wait or service person(s) to please their customers with timely attention. It enables exact and correct signaling between customers and wait persons by eliminating false or mistaken interpretations of customers' gestures by wait or service persons.

2. Description of the related art: none.

### **E) Summary of the Invention**

The general idea of the claimed invention in summarized form is: a battery-powered device that is used to signal waiters, waitresses and/or other service people that their service(s) are needed, to summon them or call them over to the position where the owner of the device is sitting, that is, the device is used for the purpose of gaining their attention and service and also to display, at a time specified by the flipping of a switch on the device, that a check for goods and services is wanted.

## **Object of the Invention**

The object of this invention: this invention shall provide a means, a physical, hand-sized, battery powered, electrically lighted signaling device and its lighted displays, to summon service or wait person(s) and eliminate the frustration, aggravation and feelings of inherent childishness in futilely trying to gain the attention of the wait person by visually tracking their movements(s) and waving one's hand(s) in the air and also to signal to wait or service person(s) that a check for goods and services provided by the establishment is wanted.

The device visually and soundlessly signals to wait or service persons, 'STOP here; I want your service,' or, 'I'm GOing now; please bring my check.'

## **F) A Brief Description of the Drawings**

### **Figure I**

#### **Explanation of the Figures**

**Figure I** depicts the following:

1. a circuit diagram (Figure I - A) which depicts the electrical circuit,
2. drawings of four views (top (Figure I-B), front (Figure I - C), side (Figure I - D) and an additional three-dimensional view with measurements (Figure I - E) of the “Cheque Please Wait or Service Person Summoning Device”),
3. a listing of the electrical specifications of the electrical components of the “Cheque Please Wait or Service Person Summoning Device,” itemized in the framed section called ‘Electrical Specifications’ (Figure I - F) which lists the voltage and resistances of the circuit, the types of lights (LEDs and incandescent bulb) and electrical specification of the switch,
4. a ‘Key’ (Figure I - G) also in a framed section and which depicts and explains the symbols used in the drawings to represent the electrical components.
